

## Web GIS Project 4: Basic HTML Web Page

**Grading:** 50 Points

**Description:** Create a website using basic HTML. You do not need to incorporate any styling or CSS. The topic or theme of the page is up to you.

### Notes:

- ❖ You do not need to apply any styling.
- ❖ The site should incorporate at least three pages that are linked with a nav bar. You must create all three pages yourself as opposed to linking a single page to other websites.
- ❖ All needed files should be included in the website file directory. However, you can link to data and resources using URLs where appropriate.

### Rubric:

- ❖ All pages of the website should include a nav bar that links the pages together. **(Up to 5 Points)**
- ❖ The head should include the character set, website title, and author information. **(Up to 5 Points)**
- ❖ You should include at least one image. The image can be store in your website directory or linked via a URL. Any pictures that are not yours should be attributed with a source. **(Up to 5 Points)**
- ❖ The site should include at least one ordered or unordered list. **(Up to 5 Points)**
- ❖ The site should include at least one table. **(Up to 5 Points)**
- ❖ The site should include paragraphs, headers, and links. **(Up to 5 Points)**
- ❖ You must embed at least one ArcGIS Online web map. **(Up to 10 Points)**
- ❖ Overall quality of the website. The resulting website should be professional, functional, and well configured. The site should have a clear theme and purpose and be designed with these in mind. Note that the page will not look great at this point since you are not being asked to apply any styling. **(Up to 10 Points)**

### Deliverables:

- ❖ Entire website directory in a compressed folder. This should include any needed files and the HTML files.
